Problem Number: 1
Problem Statement
Need to add order Order Tracking - Client

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
The code changes is php being added the backend to see the result of the order tracking	The interface has changes with the container card sizes but the background is still the same but there are changes regarding to the color of the tracking	The functionality added is that the order came on the database now unlike the old one it's only static it has its own button to be directed

Problem Number: 2
Problem Statement
Need to add page to add checkout info

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
So the code changes is that we tried to fetch what is add to cart to be directed to our shopping bag using php	The interface didn't change exception with the buttons	The functionality added is that when you add to cart your order will be directed to the shopping bag.

Problem Number: 3
Problem Statement
The display of items must be from the database

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
There are many changes since our product isn't interconnected wit the data base unlike today our product can be automatically add when we try to type down on the data base	The interface haven't change that much it is still the same	The product card and the product modal isn't called many times since the database or php code is syncing now

Problem Number: 4
Problem Statement
Need to add order info with the list of items ordered by a client in the Admin Page

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
So the code changes will focus in the two files which is the dashboard of the client and the admin I used php and to fetch the orders of the client to be seen in the dashboard of the admin	The interface change because the dashboard layout is like a table now also we added different color to identify the orders	The functionality added is that whenever the client order the sales will increase also if your an admin you will see the any users order because it is felxible

+Add as needed.
